

Dr. Marina Buckley Reports on New Wave of Radiofrequency Devices by Thermi Which are Revolutionizing Skin Tightening

Share Article

Thermi radiofrequency devices, ThermiTight, ThermiSmooth and ThermiVa, are making headlines as today's new options for nonsurgical skin tightening and remodeling. Dr. Marina Buckley of MilfordMD Cosmetic Dermatology Surgery & Laser Center in Milford, Penn. explains what each device can do to address cosmetic concerns.

MILFORD, PA (PRWEB) DECEMBER 20, 2016

Thermi radiofrequency devices, ThermiTight, ThermiSmooth and ThermiVa, are making [headlines](#) as today's new options for nonsurgical skin tightening and remodeling. These publications are raving about these devices' abilities to rejuvenate specific areas of the face and body that become looser, wobblier and less attractive with age and childbirth.

"We offer our patients the three devices because nonsurgical skin tightening is revolutionizing cosmetic surgery. We can use Thermi devices to tighten the areas that most bother women, including under the upper arms, around the neck, and even the vagina," says Dr. Marina Buckley, physician at MilfordMD Cosmetic Dermatology Surgery & Laser Center in Milford, Penn.

In some of the coverage, [ThermiSmooth](#) body was featured as a promising firming procedure. ThermiSmooth devices for the face and body offer zero-downtime, comfortable non-invasive skin remodeling. The technology's specially-designed thermistor uses dermal heating to gently heat the tissue, targeting unwanted loose areas around the eyes, mouth, cheeks, neck, arms, thighs and more.

ThermiTight, ThermiSmooth and ThermiVa are making headlines as new options for nonsurgical skin tightening. Dr. Marina Buckley explains what each device can do to address cosmetic concerns.

"In three to six 10- to 30-minute in-office treatments we can precisely sculpt a problem area to make it tighter, shapelier and less loose," Dr. Buckley says. "Our patients often note that the best part about a ThermiSmooth treatment is that it feels like a warm stone massage."

The minimally invasive **ThermiTight** technology works under the skin to remodel and reshape. The radio frequency approach delivered under the skin melts fat and tightens skin for a more chiseled, youthful neckline. Patients go home post-treatment with a gentle wrap around the treated area and usually can resume normal activities the day after treatment. "ThermiTight treatment takes only minutes in the comfort of our office. It's comfortable—although we use some local skin anesthetic to ensure the patient feels no discomfort," Dr. Buckley says. "And, to keep things safe, an infrared camera monitors skin temperature during treatment." ThermiTight also is an option for body areas that need definition on the thighs, abdomen, arms, knees and breasts.

ThermiVa, a vaginal rejuvenation treatment, uses a small device externally and internally to tighten vaginal tissue, and, with no downtime, patients can even have sex the same day. "We saw the potential with the ThermiVa and are among the first cosmetic practice in the area to offer the option to women," Dr. Buckley says. "Thermi radiofrequency technology has a good track record for many of the skin tightening procedures we offer, so the company's transition into non-surgical intimate makeovers sounded great. The fact that ThermiVa treatments also address mild urinary incontinence issues, vaginal dryness and can improve sexual satisfaction makes this more than a cosmetic boost to a woman's self-esteem. This is a quality-of-life enhancer." Aging, loss of collagen, and vaginal births can result in "vulvolaxity" and dryness, internally and externally, according to Dr. Buckley.

Dr. Buckley says long-time and new patients who don't want to have surgery but embrace noninvasive and minimally invasive aesthetic options for body contouring and facial rejuvenation are excited that ThermiVa can help them to reclaim their pre-baby bodies and restore sexual satisfaction. MilfordMD's ThermiVa treatments are performed by Dr. Marina Buckley and patients appreciate having a woman with which they can discuss their vaginal and sexual concerns. MilfordMD conducts ThermiVa educational webinars, which are free and open to the public. Stay tuned for more on that.
